

Incorporating AI into Teaching

Kerry BackRice UniversityFMA 2025

What the Future Holds (CNBC, 9/30/2025)

Derek Waldron, JPMorgan chief analytics officer:

The broad vision that we're working towards is one where the JPMorgan Chase of the future is going to be a fully AI-connected enterprise.

Every employee will have their own personalized AI assistant; every process is powered by AI agents, and every client experience has an AI concierge.

Waldron gave [JPMorgan LLM Suite] a prompt:

You are a technology banker at JPMorgan Chase preparing for a meeting with the CEO and CFO of Nvidia. Prepare a five-page presentation that includes the latest news, earnings and a peer comparison.

LLM Suite created a credible-looking PowerPoint deck in about 30 seconds.

Waldron:

You can imagine in the past how that would have been done; we would've had teams of investment banking analysts working long hours at night to do this.

From chat to agents

JPMorgan is now early in the next phase of its AI blueprint: It has begun deploying agentic AI to handle complex multistep tasks for employees, according to an internal road map provided by the bank.

Life was the same for 40 years

The image is a composite of three screenshots from early spreadsheet software. The leftmost screenshot shows VisiCalc on an Apple II, with a green background and black text. It displays a list of items with columns for item name, quantity, and price. The middle screenshot shows Lotus 1-2-3 on an IBM PC, with a black background and green text. It displays a list of employees with columns for employee number, name, department, and job. The rightmost screenshot shows Microsoft Excel on a Windows system, with a white background and black text. It displays a budget sheet with columns for item name, quantity, and price. The Excel window title is 'CASHBUDG.XLS' and the status bar shows 'Ready'.

VisiCalc (Apple II):

ITEM	NO	PRICE
MUCK RAKE	4	1.25
BUZZ CUT	1	1.25
TOE TONER	25	1.25
EYE SNUFF	2	1.25

Lotus 1-2-3 (IBM PC):

EMP	EMP NAME	DEPTNO	JOB
1777	Azibad	4000	Sale
81964	Brown	6000	Sale
40370	Burns	6000	Mgr
50706	Caesar	7000	Mgr
49692	Curly	3000	Mgr
34791	Dabarrett	7000	Sale
84984	Daniels	1000	Pres
59937	Dempsey	3000	Sale
51515	Donovan	3000	Sale
48338	Fields	4000	Mgr
91574	Fiklore	1000	Admi
64596	Fine	5000	Mgr
13729	Green	1000	Mgr
55957	Hermann	4000	Sale
31619	Hodgedon	5000	Sale
1773	Howard	2000	Mgr
2165	Hugh	1000	Admi
23907	Johnson	1000	VP
7166	Laflare	2000	Sale

Microsoft Excel (Windows):

A	B	C
38	Telephone & Telex	\$3,372
39	Office Supplies	\$900
40	Office Postage	\$864
41	Equipment	\$2,000
42	Shipping	\$46,875
43	Samples	\$480
44	Legal & Accounting	\$2,700
45	Travel & Entertainment	\$1,350
46	Training	\$500
47	Bank Charges	
48	Credit Card Fees	\$7,760
49	Other	\$1,440
50	Taxes & Licenses	\$229
51	Interest	\$10,009
52	Miscellaneous	\$1,323
53	Total	\$143,623

VisiCalc introduced
for the Apple II in
1979

Lotus-123 introduced
for the IBM PC in
1983

Microsoft Excel
introduced for
Windows in 1987

Now, with AI, we're all in the same boat

It's hard to keep up!

Plan

1. Example of what AI can do today - new Claude skill from September
2. Historical analogues?
3. A course on AI
4. Updating existing courses to use AI
5. Deep dive into Claude Code

1. Example (prompt for Claude)

Read the uploaded case (Valuing Walmart 2010). Ignore the valuation method described in the case. Instead, generate pro forma statements and perform a two-stage DCF analysis.

Document your assumptions and your reasons for them. Generate an Excel workbook and a Word doc. Format the Excel worksheets nicely.

Currently requires Claude Max subscription.

Microsoft Vibe Working (powered by Anthropic)

2. Historical analogues

1. Handheld calculators
2. Personal computers

How did teaching and learning change? Are there lessons for today?

Introduction of Handheld Calculators

- ▶ Much worry that students wouldn't learn addition, subtraction,
...
 - ▶ Studies haven't found an effect
 - ▶ But primary schools still provide practice and assessments in which calculators are not allowed
- ▶ Some hoped that schools could move beyond calculation and teach deeper math
 - ▶ That didn't seem to happen either

Introduction of Personal computers & spreadsheets

1. We added courses on how to use spreadsheets
2. We updated existing courses to use spreadsheets
3. We assess how well students can use spreadsheets (no pencil and paper valuation analyses)
Teaching how to do finance in spreadsheets is a main goal.

Why?

- ▶ Spreadsheets are used in business
- ▶ Spreadsheets are ideal for teaching the logic of some things (valuation/capital budgeting)
- ▶ Spreadsheets don't automatically do the things we were teaching before (financial calculators → spreadsheets)

What about AI?

AI is used in business

AI is useful for teaching/tutoring

AI can automatically do many things we were teaching before

AI is more like calculators than spreadsheets. We worry that students won't learn skills that they need.

Like primary schools and arithmetic, we will need to have practice and assessments in which AI is not allowed

AI is used in Business

MIT/Media Labs State of AI in Business 2025:

Workers from over 90% of the companies we surveyed reported regular use of personal AI tools for work tasks. In fact, almost every single person used an LLM in some form for their work.

Plan

Example of what AI can do today
